

nVX POWERED BY TETRAVX

TetraVX's nVX offering is a cloud-based unified communications solution that provides the flexibility and mobility to do business from anywhere, at any time. Easy to implement and easy to manage, nVX is a cost-effective alternative to aging on-premises solutions. nVX provides a seamless migration of your business phone system to the cloud.

Connect from Any Device, Anywhere

Equipped with softphone applications for PC or Mac, tablet, and mobile devices, you can connect from any device, anywhere.

Leverage Your Existing SIP Phones

Are you ready to upgrade your UC solution, but not ready to lose the hardware you've already invested in? nVX works with most standard SIP phones to make sure you can continue to use the hard phones you already have. Need new phones? No problem, we offer various options from top manufacturers that can be purchased or rented.

Manage Using A Self-Service Admin Portal

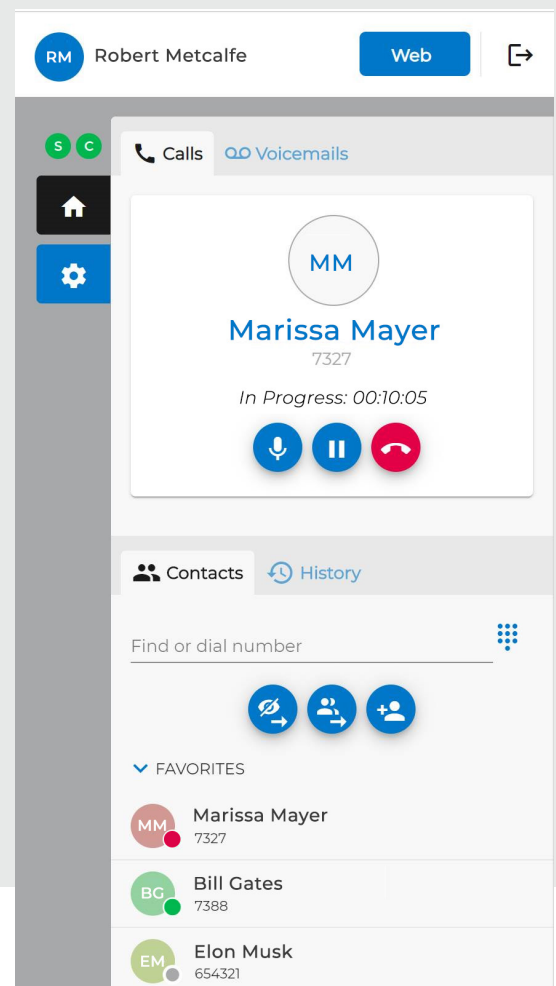

nVX has an easy-to-use portal that provides visibility into your entire UC environment. Instantly see system counts on all your devices, extensions, users, destinations, CC queues, IVR menus, ring groups and voicemails. You can also define call handling using portal applications like call routing and ring group forwarding.

Deploy Immediately

nVX is built for the cloud and can be easily deployed with little to no dependencies, no VPN or private connection required.

Flexible Configuration

nVX is a flexible platform that can be configured to meet your unique business use cases. With an end-user first approach, we work with your team to document individual use cases across your organization and deploy the solution so that it aligns with your operations.

WHY WORK WITH TETRAVX

TetraVX understands every step of the unified communications journey, providing an array of products and services to fit your unique business needs. Whether you're deploying your first UCC system or have existing infrastructure you're looking to leverage, we'll work with you to develop a tailor-fit solution made just for you.

UCC READINESS ASSESSMENT

Understand the impact your new solution will have on your network and validate its performance with the additional workload.

CARRIER & CONNECTIVITY

As a CLEC and ISP, we can provide connectivity in combination with any of our multiple UCaaS offerings.

USER ADOPTION

We deliver custom communication and training plans built to drive a positive user experience and ultimately increase user adoption.

INTEGRATED COLLABORATION SERVICES

In the modern age of a digital workplace, we provide state of the art AV systems to create more efficient workflows and workspaces.
